

THINGS to Know About Me... . I have a passion for educating people about all the

incredible things the energy industry does.

I hold a lot of respect for the blue-collar men and women who brave the elements day in and day out to keep our country moving.

I earned my Ph.D. from Texas A&M University where I studied climates of earth's past.

Andrew Parker

Director of ESG & General Manager, SPL

How is SPL helping clients with their ESG needs?

Our industry experts are dedicated to assessing our clients' demands and designing solutions that enable them to characterize their environmental impact. We use cutting-edge technology and processes, such as state of the art OGI cameras, to deliver the data and compliance needed to ensure that our sector can produce, transport, and process oil and gas sustainably. To expand our ESG offerings, we acquired Oxidor Laboratories in early 2022 to provide wastewater and chemical studies to industrial, consulting, and government clients.

How is SPL integrating Machine Learning and Al into its digital offerings?

We just established a strategic partnership with CleanConnect.Ai to advance their artificial intelligence-based autonomous operations technology in the market. Operators can use CleanConnect.Ai to remotely manage HSE and ESG tasks, including best-in-class emissions and methane leak monitoring services. This partnership with CleanConnect.Ai shows our commitment to creating innovative ESG solutions for our clients. Thanks to CleanConnect. Ai and SPL's end-to-end platform support, operators will have an unparalleled solution for tracking methane leaks, emissions, and spills.

How do SPL's laboratory testing and analytical capabilities serve its clients?

As an analytical service leader for decades, SPL pioneered several industry-standard testing methodologies now used by labs worldwide. We strive to give more than just test results by understanding our clients' products and processes and delivering precise analytical data at every level of the energy value chain. As a result, our clients can enhance asset quality, forecast well depletion, preserve valuable equipment, and make strategic decisions. Our clients are also our partners, and we act as an extension of an organization's in-house team to discover problems and possibilities. Together, we assist with laboratory analysis and deliver the unique blend of engineering and technology needed to build and deploy solutions.

SPL purchased AFS (Assured Flow Solutions) in 2021, extending our laboratory testing, software, and tech-enabled advisory services. Adding AFS to the SPL team strengthens our Science-of-Sure approach to Testing, Inspection, and Certification (TIC). The acquisition expands SPL's entire TIC digital platform's application capabilities in flow assurance, asset integrity, and ESG.

Leader in Testing, Inspection and Certification services

What is SPL?

SPL is a global leader in testing, inspection, and certification (TIC), offering a comprehensive range of services to the energy industry. We combine ISO-certified labs across North America, proven test techniques, and world-renowned experts with patented software and digital workflows to give our clients data assurance and insights. Our cloud-based digital systems enable real-time tracking and optimization for clients in the production, midstream, and finished products end markets.

How does SPL help the energy industry?

We understand the issues the energy industry faces today and will face in the future. In collaboration with the world's biggest energy firms, SPL has tackled some of our industry's most complex challenges with the world's largest energy businesses. We've improved productivity, profitability, safety, and sustainability using laboratory, engineering, and technology solutions. SPL delivers end-to-end hydrocarbon testing, measuring, and reporting solutions. Using cuttingedge technology, precise procedures, and highly qualified employees, we give trusted insights our clients can use.

How does SPL differentiate itself?

We use our technology and expertise to help our clients tackle their most critical operational and design difficulties. SPL's unique combination of laboratory and inspection experience allows us to identify and address customer challenges and possibilities quickly. We make the complex simple so our clients can make rapid decisions and focus on what they do best.

What is SPL's approach to ESG?

ESG is in our DNA at SPL, and our commitments are fourfold:

- Environmental: As environmental stewards, we strive to positively impact our industry and planet. We do our part by continually enhancing our operations, minimizing waste, reducing sample size requirements, cutting emissions, and more.
- •Safety: SPL's people come first. Our most important promise is that every team member returns safely to their families.
- •Social: Our team works to better the communities in which we live and work. We always look for ways to give back, from volunteering to donating.
- •Governance: We uphold the high standards our clients expect. To keep track of our activities, we use advanced accounting, field operations, and laboratory management software. In addition to annual internal audits, we participate in numerous third-party audits to verify we are meeting our clients' standards.
